The Alternate Level of Care (ALC) Challenge: Potential areas for cost-effectiveness analysis

Guillermo Sandoval

In this presentation, Guillermo will first provide an overview of the ALC challenge, including key-related indicators, trends, and variations across main hospital and patient characteristics. Then, he will discuss potential determinants of ALC days under various perspectives, such as those around flow of patients, capacity and demand, funding mechanisms, and integration of care services. In addition, Guillermo will examine potential areas where cost-effectiveness analysis might be useful to support evidence-based policy making.
